

Help Save the Nechako White Sturgeon

White Sturgeon are Endangered

- The white sturgeon is the largest freshwater fish in North America.
- The Nechako white sturgeon is unique from all other sturgeon in British Columbia.
- A large Nechako sturgeon can reach 3 metres in length, and live to almost 100 years old!
- There are now less than 600 white sturgeon remaining in the Nechako watershed.
- White sturgeon do not begin spawning until they are 15 to 30 years old. The lack of young sturgeon in the Nechako means that an entire generation is already missing.

How you can help

Report All Poachers and Polluters!

Any angling for white sturgeon in the Nechako watershed is illegal. Report any captures to:

- Conservation Officer Service - 1-877-952-7277
- Fisheries and Oceans Canada - 1-800-465-4336
- or your local RCMP detachment

Report any incidental captures, information from tagged sturgeon, or sturgeon sightings to:

- Ministry of Water Land and Air Protection, Prince George (250) 565-6135

Returning a caught fish to the water quickly is critical to its survival.

Please, do not pollute the water in any way.
